

# SAP NS2 Secure HANA Cloud

Cloud Infrastructure and Secure Managed Services to Help Protect and Run Your SAP Applications

## Cloud Infrastructure and Secure Managed Services

In today's world, protecting your applications is a top priority of U.S. Government and private sector teams in the fields of national security, homeland security, and critical infrastructure. High operational costs along with the threat of cyber-attacks by U.S. adversaries underscore the critical mission of safeguarding your information in the storage and transfer of massive amounts of data across multiple data nodes, both on premises and increasingly in the cloud.

SAP NS2® created the SAP NS2 Secure HANA Cloud (SHC), which is a cloud offering, to support SAP HANA®, an in-memory database, and additional databases for non-HANA based applications. This offering combines the capabilities and experience of tenured SAP NS2 personnel in the delivery of Secure Support, Secure Managed Services, and our cloud resources with deep experience with the SAP HANA technology. This experience offers not only the support required for the successful delivery of your project today, but the ability to scale elastically with business requirements that may unfold. The SAP NS2 team has subject matter expertise in delivering SAP solutions that address our customer's policy and regulatory needs.

The SAP NS2 Cloud is an offering to meet our government and critical infrastructure customers' unique security requirements. This offering is based on our years of experience providing solutions to federal, state and local, and aerospace & defense organizations while helping to accommodate a solution to meet the necessary community's security and regulatory requirements. Our offering is an enterprise scale architecture that can incorporate ongoing improvements in your applications because of our ability to tailor your computer hardware, storage, networks, security, operating system, database, and application management in support of your mission.

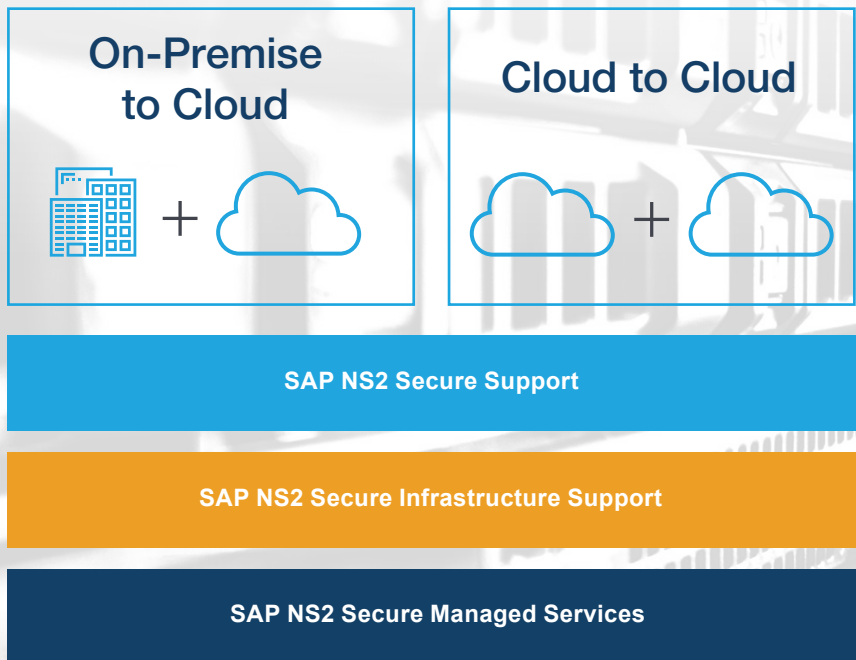

This strategy helps customers comply with the necessary requirements for ITAR, DoD SRG, or FedRAMP related data because it allows organizations to run SAP HANA in a secure cloud infrastructure with comprehensive services and support. Our solution will help reduce issues with infrastructure storage, virtualization and provisioning because of the resource and expertise included in the offering to help manage and maintain your program. The secure managed services may include monitoring, notification, capacity management, database management, operating system management and patch management. The additional resources and support provides the technical expertise required to operate efficiently and also leverage the new innovations provided from SAP.

The NS2 Cloud provides a seamless customer journey to the cloud, enabling the organization’s specific policy requirements while delivering the benefits of the cloud. The NS2 Cloud couples the SAP NS2 Secure Support offering with Secure Infrastructure Support, as well as Secure Professional Services. It can also be tailored to address customer-specific security requirements.

The NS2 Cloud, supported only by U.S. citizens, will operate on U.S. soil. Data access and data retention will follow the “U.S. Soil, U.S. Citizen” operation. Suppliers that access data will be minimized and subject to the same aforementioned requirements. SAP NS2 cleared personnel are available to support customer requirements.

Today, SAP NS2 invites your organization to consider participating as a Premier Customer in the SAP NS2 Cloud.

**THE CLOUD YOUR WAY... SECURELY**

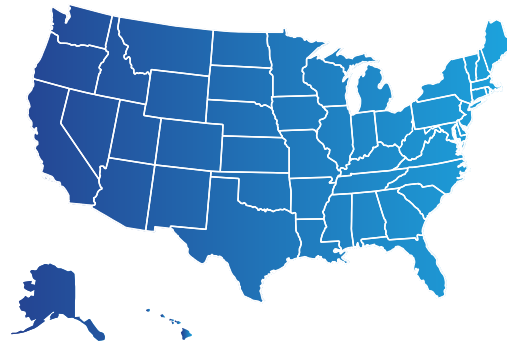

## THE NEW ALTERNATIVE TO BUSINESS AS USUAL

### SAP National Security Services, Inc. (SAP NS2®)

SAP National Security Services Inc. (SAP NS2®) is an independent U.S. subsidiary of the global enterprise software company SAP, offering a full suite of world-class enterprise applications, analytics, database, cyber security, cloud, and mobile software solutions from SAP, with specialized levels of security and support to meet the unique mission requirements of U.S. national security and critical infrastructure customers.

**In addition to software solutions, the company offers consulting and secure support services from credentialed experts in the national security space.**

With **100% U.S.-based facilities and U.S. citizen staff**, SAP NS2 is building on years of experience in supporting U.S. Government entities and private companies such as defense contractors, telecom carriers, and major financial institutions that have special information assurance needs.

With SAP solutions, delivered by SAP NS2, your organization can run faster, smarter, and leaner in the most secure environments — from the headquarters to the data center to the front lines.

Our solutions are trusted to run some of the largest, most demanding, and most sensitive databases and applications in the world.
