NS2 LABS

CAMPUS SECURITY PLATFORM

In today's threat environment, while agencies use technology to secure perimeters and access points, they may remain vulnerable to physical threats from within. A comprehensive, layered approach to security is critical.

VEHICLE TRACKING

Obtain a vehicle's unique digital signal every 60-90 seconds with passive sensors and license plate readers. Deploy sensors to triangulate coverage or build a "digital wall."

WIFI TRACKING

Locate visitors inside and outside of buildings based on their mobile device connection to a facility WiFi access point. Sensors can also work on pattern emitting smart badges.

DRONE TRACKING

Latch onto a unique natively emitted drone signal to triangulate its location. Fixed and portable sensors allow a new monitoring location to be set up in minutes.

Comprehensive entity tracking, identification and alerting

NS2 Campus Security Platform allows security teams to pinpoint and monitor vehicle, drone, and WiFi device activities. Complement physical perimeter security measures, preventing internal threat agents and external bad actors from taking advantage of the gaps that exist above and between facility and building checkpoints.

Campus Security Platform uses sensor and signal technology to maximize the effectiveness of your current security force. Discrete, non-invasive sensor and signal monitoring limits the need for cameras, line of sight, or manual monitoring. Activity Analytics automatically notify and update staff to any change-in-behavior events, such as late-night visits or access to new pathways. It incorporates an innovative machine-learning algorithm that rapidly processes, analyzes and stores sensor data.

NS2 Campus Security Platform maximizes the effectiveness

LPR and Sensor Technology - Capture and monitor unique identifying information

- No overt signs of monitoring or line of sight requirements
- Track visitors on the surface, in the air, within and outside of buildings

National Security Expertise - A system designed for each unique campus

- Define integration points and sensor patterns for optimal results
- Secure, custom deployment developed by a trusted national security provider

Analytics and Machine Learning - Know who, what, when and where

- User dashboard provides insight into patterns, trends, and facility statistics
- Automatic notification of pattern irregularities and change-in-behavior events

Campus Security Platform makes it possible for agencies to identify, track and receive notifications on activity inside or nearby each of their facilities. By answering the question "What are entities doing from the time they pass the initial checkpoint to the time they leave the facility?", the NS2 Campus Security Platform enables security teams to confidently ensure the continued safety of the entire facility, base or campus.
