

# HANA Health Care Control Center

Automate, analyze and adjust your HANA system

The HANA Health Control Center pivots your agency from reactive to proactive database management. It replaces the time-intensive effort of running manual SQL scripts to monitor and troubleshoot your system. The Center's comprehensive self-service dashboard enables your staff to schedule and run automated mini-checks and review historic results and trends. Ensure your system's long-term usability and minimize service interruptions with:

## Continuous Monitoring

Proactively monitor your HANA environment to pinpoint and identify problems before they impact mission critical operations. Catch potential configuration issues and security risks that could affect data integrity, performance or stability.

## Actionable Results

Identify areas of concern with a 12-month historical trend analysis, visual dashboards and interactive charts. Leverage real-time data and analytics to deliver insight, break down critical findings, and provide high-value recommendations.

## ALL OF THE INSIGHT WITH NONE OF THE LIMITATIONS

### CONFIGURATION

There is no limit to how you run your HANA configuration. Health Control Center is an internal web-based application that sits on top of the HANA database, behind your agency's firewall.

### SIZE

Maintain critical uptime, regardless of the size of your HANA installation. Configure Health Control Center to meet your agency's needs, whether you have one or many HANA systems.

### RUN COUNT

Health Control Center automates system monitoring. Configure Health Control Center system to run as many systems checks as needed for optimum performance.

## Optimize HANA system stability, performance and operations in three simple steps:

- 1 Automate Mini-Checks – Streamline the oversight of your HANA environment**
  - Reduce the time and resources spent running manual diagnostic SQL scripts.
  - Identify stability and performance issues caused by incorrect configuration.
  - Isolate potential security risks related to user roles and privileges.
  - Review file system, authentication, and encryption settings against best practices.
  - Automatically run the correct scripts for your system - even post upgrade.
- 2 Analyze and Synthesize Data – Open a window into your HANA database ecosystem**
  - Catch issues before the normal flow of your operations can be affected.
  - Gain valuable insight without deep dive analysis through an intuitive dashboard.
  - Analyze health trends through a powerful set of trending and contextual data.
  - Review live results data with charts and graphs that are updated in real time.
  - Access system expertise through dynamic links to the SAP HANA support library.
- 3 Take Action – Pinpoint issues and resolve them rapidly**
  - Generate high-value security and configuration resolution recommendations.
  - Drill down on critical findings and review areas of concern in full detail.
  - Review critical issues after major events to quickly answer “how are we doing?”
  - Spend more time focusing on your mission not database administration.

HANA Health Center implementation includes valuable NS2's technical expertise. Our experts work with your agency to deliver a turnkey solution that is tailored to the needs of your mission. The result is actionable insight and recommendations that support your agency's unique system requirements. HANA Health Control Center's automated review and results interpretation significantly reduces manual efforts - **saving agencies the cost of ¾ of a highly skilled technical FTE position.**
